Reasons of Allowance/Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Sumit Bhattacharya on 04/24/08.

In response to the amended claims on 03/24/08, enter the amended claims on 03/24/08, and further amend the claims as follow :

- a) cancel claims 5-8 (claims 3-8,12,13,18,19 have been canceled);
- b) claim 9, line 1, replace "claim 5", by --claim 1—
- c) claim 10, line 4, after "pipeline control logic", insert —unit—
- d) claim 10, line 9 (Page 4, line 3 from the top of the amendment), after "an exception and retirement logic", insert --unit—
- e) claim 10, line 10 (Page 4, line 4 from the top of the amendment), after "an exception and retirement logic", insert --unit—
- f) claim 11, line 1, after "pipeline control logic", insert —unit—
- g) claim 15, line 2, after "control logic", insert --unit—
- h) claim 16, line 4, after "including", insert --:--
- i) claim 16, line 7, (Page 5 line 3 from the top of the amendment), after "pipeline control logic", insert —unit—

j) claim 16, line 12, (Page 5 line 8 from the top of the amendment), after "an exception and retirement logic", insert --unit--

k) claim 16, line 14, (Page 5 line 10 from the top of the amendment), after "an exception and retirement logic", insert --unit--

l) claim 17, line 1, after "control logic", insert --unit--

m) claim 21, line 1, after "control logic", insert --unit--

The following is reason for allowance :

None of the prior art of record teaches the combined features of :

a) determining if a stalled operation of a first thread is due to a loading of data from a memory device; and flushing an instruction from said first thread from a pipeline of a processing system after a predetermined number of clock cycles if data is to be loaded from the memory device before executing the instruction, and marking the instruction as a miss and the reschedule of the instruction to be executed in the pipeline (claims 1)

b) a scheduler to pass instructions from a first thread and a second thread to an execution pipeline; a pipeline control logic unit coupled to the execution pipeline to determine if a stalled execution of said first thread is due to a loading of data from a memory device and to flush an instruction from the first thread from the execution pipeline after a predetermined number of clock cycles if data is to be loaded from the memory device before the instruction can be executed and an exception and retirement logic coupled to the execution pipeline, and the instruction marked as a miss is to be detected by the exception and retirement logic unit (claim 10)

c) a memory bus coupled to system memory, a processing system coupled to said memory bus, the processing system including : a scheduler to pass instructions from a first thread and a second thread to an execution pipeline, the pipeline control logic unit coupled to the execution pipeline to determine if a stalled execution of the first thread is due to a loading of data from system memory and to flush an instruction from the first thread from execution pipeline after a predetermined number of clock cycles if data is to be loaded from the system memory before the instruction can be executed and an exception and retirement logic unit coupled to the execution pipeline, and the instruction marked as a miss is to be detected by the exception and retirement logic unit (claim 16).
